

Vancouver Workshop Release

Why Is This News?

Aquaponics is a growing field of general interest to the public in light of environmental sustainability and health concerns.

This workshop brings together some of North America's top names in the field. Along with our team at Noa Fisheries, Dr. Nick Savidov (Alberta Agriculture and Rural Development) and Charlie Shultz (Lethbridge College) have also agreed to be available for a limited number of interviews and guest appearances in conjunction with the workshop.

This workshop is being offered for the first time in BC after successful introductions in Ontario and Alberta in the past year.

Participants will get very rare opportunity to access facilities not generally open to the public.

Of Interest To:

General Public – “GMO free” and “hormone free” are becoming more important to the general consumer and there is a keen interest in new developments, especially when driven by a Canadian company.

Educators & Parents – Science, environment, health and more can be taught and learned through aquaculture. Classroom and home aquaponics operations will be discussed along with the commercial side.

Hobbyists – Gardeners can expand their green thumbs into living water features and survivalists can develop healthy stocked ponds

Landscapers – Learning the design and maintenance of an aquaponics system can provide your business with a specialty service that can differentiate your brand in the marketplace.

Business Developers – Aquaponics is a growing field with a huge demand for commercial fisheries across Canada, learn what you need to know to establish a commercial aquaponic system
